

# Openfunds Fields (sorted by OF-ID)

Status: FINAL

Version: Version 1.31  
(Including fields of this and all preceding versions.)

Date: 2023-09-29

Notice: IMPORTANT NOTICE:

-----  
This version (version 1.31) contains a mixture of requests, updates and corrections to the standard, including updates to the Full Portfolio Holdings (OFPH) field set, the addition of several new dynamic (OFDY) data fields, and various other additions and amendments. To receive more information about the openfunds initiative, visit <https://www.openfunds.org>.  
-----

In general, openfunds uses lower case for values, i.e. "yes" / "no". However, implementations of interfaces based on the openfunds standard should not be case sensitive as many existing systems use a different diction.  
-----

Please note, that as a general rule an empty field means ""unknown"" within openfunds. To avoid any deletion of a value in the receiving database, openfunds recommends using the command ""[IGNORE]"" instead of a value. (Without quotation marks but including square brackets. All capital letters).  
-----

Excel knows different ways of formatting percentage figures. As some of them might not convert properly into decimal figures, openfunds strongly recommends using decimal figures only.  
-----

Please note that fields that are no longer supported are now marked at the top of the field description and no

Commonly used standard time formats are:

- EST Eastern Time Zone (USA); UTC-05:00
- CST Central Time Zone (USA); UTC-06:00
- PST Pacific Time Zone (USA); UTC-07:00
- CET Central European Time; UTC+01:00
- HKT Hong Kong Time; UTC+08:00
- SST Singapore Standard Time; UTC+08:00

Please note, that mentioning the abbreviation of a standard time zone is an approximation as there are many countries that know daylight saving time. In this case openfunds would assume only mentioning one abbreviation, e.g. CET for Central European Time, despite between March and October it should be CEST for Central European Summer Time. Additionally, openfunds recommends not to use this field for automatic implementation, as there are quite some identical abbreviations for different time zones, e.g. ADT stands for Arabia Daylight Time (UTC+3:00) or Atlantic Daylight Time (UTC-3:00).

For automatic information exchange please refer to "OFST010252 Fund Valuation Point Time Zone Using TZ Database".

OF-ID	<b>OFST020080</b>	Field Name	<b>Share Class Consolidation Key</b>
Field Tags	Hybrid Field   Additional		
Field Level	Fund		<a href="#">Link Reference</a>
Data Type	string	Introduced / Revoked	0.87 / --
Description	<p>An unique alpha-numeric string that is equal for all share classes of a fund. Usually this field is populated with the proprietary share class key of the fund company's database. This field helps to decide whether a new ISIN represents a new fund or a new share class of an existing fund.</p> <p>This field is a 'Hybrid Field', meaning that the recipient may change the value in their database (<a href="https://openfunds.org/knowledge/whitepapers/fieldtypology/">https://openfunds.org/knowledge/whitepapers/fieldtypology/</a>). Therefore, it can be used for consistency checks only for one specific transmission between sender and recipient. Otherwise there is a risk, that in the sender's database there are conflicting consolidation keys from different senders.</p>		
Values	Any unique alpha-numeric string (per fund house) that is equal for all share classes of a fund.		
Example	AP55b

OF-ID	<b>OFST020262</b>	Field Name	<b>Share Class NAV Hedge</b>
Field Tags	No longer supported   Core		
Field Level	Share Class		Link Reference
Data Type	string		Introduced / Revoked 0.92 / 1.26
Description	//No longer supported. Please use "OFST020261 Currency Hedge Share Class" instead.//		
	Is there a currency hedge on this share class?		
	Please note, that this field relates only to a currency hedge on share class level. This can be a total currency hedge to the OFST010410 Fund Currency or a residual hedge in order to avoid over hedging.		
	To describe the kind of currency hedges within a portfolio, please refer to field "OFST010211 Currency Hedge Portfolio" (fund level).		
	If there is a 100% NAV hedge (this field answered with "yes, 100% NAV hedge"), the performance in "OFST020540 Share Class Currency" equals the performance in "OFST010410 Fund Currency" adjusted for the interest rate differential minus hedge costs.		
	If the fund manager wants to avoid overhedging, he will do a residual hedge ("yes, residual hedge"). In this case he will only hedge the proportion of the share class not invested in the currency of the Share Class Currency (OFST020540).		
	For more information please refer to the white paper: "Hedging – including and after v1.27" at <a href="https://openfunds.org/hedging-v2/">https://openfunds.org/hedging-v2/</a>		
Values	"no", "yes, 100% NAV hedge", "yes, residual hedge"		
Example	yes, 100% NAV hedge		

OF-ID	<b>OFST020280</b>	Field Name	<b>Has Equalization Method For Performance Fee</b>
Field Tags	Full		
Field Level	Share Class		Link Reference
Data Type	boolean		Introduced / Revoked 1.25 / --
Description	Is an equalization method for the performance fee used? Typically used by hedge funds, but not very common for mutual funds. Equalization is used by funds in order to ensure that every shareholder pays the same percentage of performance fee no matter when they subscribe to the fund.		
Values	"yes" / "no"		
Example	yes		

OF-ID	<b>OFST020285</b>	Field Name	<b>Has Equalization Method For Distribution</b>
Field Tags	Full		
Field Level	Share Class		Link Reference
Data Type	boolean		Introduced / Revoked 1.26 / --
Description	Does the share class use an equalization system for tax purposes? The income that has been accumulated during the distribution period before units were purchased is known as the equalization. Field Tags	Core				
Field Level	Share Class			Introduced / Revoked	0.85 / --
Data Type	date				
Description	Launch date of the share class. This field is linked to "OFST010240 Fund Launch Date" as the launch date of this share class must not be elder than the fund's launch date.				

To distinguish launch date from inception date, openfunds defines these two often synonymously used terms as follows:

- 1) Launch date: offering period is closed and a net asset value (NAV) is calculated.
- 2) Inception date: date when share class juridically came into existence. Usually there will be an offering period. In this case the inception date would be equal to the "OFST020558 Subscription Period Start Date". However, there might be situations without offering periods, i.e. if there was a fund merger. In this case the inception date would be the "OFST020560 Share Class Launch Date".

Description	<p>Specifies the national label of the Legal Form OFST160100 in English or in national language where appropriate. Usually the value of this field can be deducted by knowing the fund's Domicile (OFST010010 or OFST010011) and its Legal Form (OFST160100). However, there are a few exceptions from this rule.</p> <p>One is "Company with variable capital (SICAV)" in Germany, as there exist two possible values "Investmentaktiengesellschaft (InvAG) mit veränderlichem Kapital (KAGB §108ff)" or "Offene Investmentkommanditgesellschaft (InvKG) (KAGB §124ff)".</p> <p>Two other exceptions are "Open-Ended Investment Company (OEIC)" in United Kingdom and Ireland as for both countries there are two possible values. First "Open-ended investment company (OEIC)" or second "Investment company with variable capital (ICVC)". Please note that even for an Irish or British ICVC one should choose: "Open-Ended Investment Company (OEIC)".</p> <p>This field helps to determine the appropriate value of "OFST160100 Legal Form". Therefore, its main purpose is the allocation of national nomenclatures to the values mentioned in field "OFST160100 Legal Form". This field is for information only. Field Tags	Additional		
Field Level	Share Class	Link Reference	OFST350100
Data Type	string	Introduced / Revoked	1.27 / --
Description	<p>Investment Theme is used to classify equity funds investing a large part of their assets in companies belonging to a specific investment theme. Unlike for the three other classification criteria, the investment theme of a fund cannot be verified from the fund holdings. It is included in the classification results on the basis of a declaration of the fund group concerned. A fund group can declare whether a fund invests according to a specific investment theme. This investment theme may then be included into the classification as a flag. Investment themes are flagged alongside the verified EFC categories. A verified sector or regional equity fund can thus also have a specified investment theme.</p> <p>The number of specific investment themes included into the EFC structure will be updated whenever deemed necessary. The most current list of Investment Themes is available at <a href="https://www.efama.org/SitePages/EFCF.aspx">https://www.efama.org/SitePages/EFCF.aspx</a>.</p>

Data Type	string		Introduced / Revoked 0.86 / --
Description	<p>Initial investments into a share class may be subject to a minimum requirement, as set forth in the prospectus – such as buying a specific number of shares, or also by investing a specific amount of money. A subscription requirement for a specific amount of money usually implies that one can invest in fractions of a share class unit, so long as the minimum amount of money is met. For instance, assume that a share class of a fund costs 125 currency units. If investors are required to buy a specific number of shares, "shares" is the right choice. If, however, the requirement is to invest 200 currency units, then "amount" is the answer.</p> <p>In exceptional cases the prospectus mentions different requirements for initial and subsequent subscriptions. For example, a minimum of 1,000 currency units are required for initial subscription, and subsequent subscriptions must be of at least 10 shares. Such combination is reflected as "shares and amount". In case the prospectus only mentions as an example: "Minimum investment is 10,000 currency units or equivalent in shares...", openfunds expects indication of "amount" only.</p> <p>In case there is no minimal subscription neither for initial nor for subsequent subscriptions, please choose "shares and amount" and insert the number '0' (zero) into the following linked fields:</p> <ul style="list-style-type: none"> <li>- OFST400220 Minimal Initial Subscription In Shares</li> <li>- OFST400250 Minimal Subsequent Subscription In Shares</li> <li>- OFST400230 Minimal Initial Subscription In Amount</li> <li>- OFST400260 Minimal Subsequent Subscription In Amount</li> </ul>

They refer to the Value "single pricing" in field "OFST401002 Pricing Methodology".</p> <p>"no swing NAV": A fund which calculates only one single NAV per share which is used for all capital activities and does not apply a swing factor.</p> <p>"full swing NAV": The unswung NAV is adjusted each time there is capital activity, irrespective of its size or significance to the fund. The direction of the swing is determined by the net capital activity of the day.</p> <p>"partial swing NAV": The NAV only swings if a predetermined net capital activity threshold (the swing threshold) is exceeded on a dealing day. As with full swing the direction of the swing is determined by the net capital activity of the day. Partial swing can also be referred to as semi-swing pricing.</p> <p>In the cases (b) and (c) above the two resulting NAV are also referred to as the transaction price (swing price) and the valuation price (unswung price).</p>

Field Tags	Full			
Field Level	Share Class		Link Reference	OFST405523
Data Type	string		Introduced / Revoked	1.2 / --
Description	<p>This field specifies the dates within the selected period. For a weekly period (OFST405521 Subscription Trade Cycle Period "weekly") you can choose one or more weekdays or the first or last business day of the week. In general, there is a difference between "1st business day" / weekdays and "last business day". For instance, "last business day" would shift Friday to Thursday and the value "Fr" would shift Friday to Monday in case Friday is a banking holiday.</p> <p>If weekly subscriptions are possible on more than one weekday within the week (OFST405563 Number Of Possible Subscriptions Within Period &gt; 1), you should combine these values by using a pipe " " (ASCII 124). You can combine any weekday with another weekday and also the two values "1st businessday" and "last business day". However, you should not combine a weekday with one of the two values "1st business day" or "last business day" as this might lead to contradictory values.</p> <p>In case of irregular subscription dealing days please use the field "OFST405532 Irregular Subscription Dealing Days".</p> <p>More information about trade cycles can be obtained by downloading the whitepaper at <a href="https://www.openfunds.org/en/trade-cycle">https://www.openfunds.org/en/trade-cycle</a></p>

OF-ID	<b>OFST425565</b>	Field Name	<b>Weekly Redemption Dealing Days</b>	
Field Tags	Full			
Field Level	Share Class			Link Reference OFST425563
Data Type	string			Introduced / Revoked 1.2 / --
Description	This field specifies the dates within the selected period. For a weekly period (OFST425561 Redemption Trade Cycle Period "weekly") you can choose one or more weekdays or the first or last business day of the week. In general, there is a difference between "1st business day" / weekdays and "last business day". For instance, "last business day" would shift Friday to Thursday and the value "Fr" would shift Friday to Monday in case Friday is a banking holiday. If weekly redemptions are possible on more than one weekday within the week (OFST425563 Number Of Possible Redemptions Within Period > 1), you should combine these values by using a pipe " " (ASCII 124). You can combine any weekday with another weekday and also the two values "1st business day" and "last business day". However, you should not combine a weekday with one of the two values "1st business day" or "last business day" as this might lead to contradictory values. In case of irregular redemption dealing days, please use the field "OFST425572 Irregular Redemption Dealing Days". More information about trade cycle can be obtained by downloading the whitepaper at <a href="https://www.openfunds.org/en/trade-cycle">https://www.openfunds.org/en/trade-cycle</a> .

Data Type	string		Introduced / Revoked 1.2 / --
Description	<p>This field specifies the dates within the selected period. A monthly period (OFST425561 Redemption Trade Cycle Period = "monthly") consists of two terms. Term a) represents a number, term b) a day. You can choose one or more days during a month. You can choose from any meaningful combination of a number (e.g. "1st", "2nd", ... "31st" or "last") and a day (e.g. "calendar day", "business day", "Su", "Mo", Tu", etc.) like "last Fr". If monthly redemptions are possible on more than one day within the month (OFST425563 Number Of Possible Redemptions Within Period &gt; 1), you should combine these values by using a pipe " " (ASCII 124). For instance, "15th calendar day   last business day". Description	Contingent deferred sales charge fee (CDSC Fee). A CDSC Fee is a fee that is charged to investors for early redemptions. This fee is also known as sales charge or back-end load. CDSC Fees are a percentage of the value of the sold fund. It is the highest in the first year and decreases annually. After the specified period the fee amounts zero. The mechanism might differ, but quite often it is a combination of an upfront fee paid by the fund to the investment manager or distribution partner. At the end of the required period, the investment manager or distribution partner will reimburse the whole fee back to the fund. If some of the investors had redeemed early they have to pay a portion of that fee which related to their investment duration.

Description	<p>This field is the Performance Fee shown in the "Fees and Costs Summary" table in the PDS. It is intended as a representation of potential on-going performance fee expenses and should be calculated as an average using the performance fee costs from the last five financial years (or as many as the performance fee was applicable). This amount includes the Performance Fee costs arising from Interposed Vehicles. That other amount is also explicitly reported as additional information in the field below (P011). Other fields in this form are to be used to describe the structure of the ongoing performance fee. Those fields are; Y010, Y020 (OFST720155), Y030, Y040 (OFST720165), Y050, Y060 (OFST720175), &amp; Y070</p> <p>//The correspondent RG97 field introduced in Morningstar's RG97 collection form 'MDU01G015' is: P010 Performance Fee Costs - PDS//</p>

OF-ID	<b>OFDY005205</b>	Field Name	<b>Yield One Day Gross</b>
Field Tags	Dynamic Data		
Field Level	Share Class	Link Reference	
Data Type	double	Introduced / Revoked	1.31 / --
Description	The one day gross yield is an annualised dividend yield figure for the date listed (OFDY000036 Valuation NAV Date). Dividend yield is a ratio expressing the value of dividends paid by the share class as a percentage of the share class price. This is calculated by dividing the dividend value by share price over a period and then multiplying by 100 to reach a percentage figure. For the one day annualised yield this is further multiplied by a factor of 365 to reach the final annualised yield figure.		
Values Example	Percentage expressed as a decimal figure, 100%=1, 5%= 0.05

Description	<p>Recommended holding period (RHP) of the fund in years. Default values are integer. However, as there might be exceptions you can use decimal figures for fractions of a year. Please note, that openfunds uses RHP (integer) to reflect the field 'time horizon' within the EMT.</p> <p>Conversion to string as shown in the EMT can be done as follows:</p> <p>1 day &lt;= very short &lt;= 1 year  1 year &lt; short &lt;= 3 years  3 years &lt; medium &lt;= 5 years  5 years &lt; long</p> <p>// The correspondent PRIIP field introduced by the European Working Group with their PRIIPS Data Dictionary Template (EPT) is:  EPT: 01120_Recommended_Holding_Period  and the corresponding field to the CEPT (addition to the EPT) is:  CEPT-RHPs: 31030_HP_period_3.//</p>		
Values	Default is an integer value. For exceptions use a decimal figure (max 7 digits after the decimal point).

Data Type	double	Introduced / Revoked	1.26 / --
Description	The fund exposure to cash (liquidity) as a percentage. Cash represents the net cash exposure on liquidity accounts based on the fund's P&L. The field corresponds to the CIC field 71 "Cash" (Notes and coins in circulation that are commonly used to make payments). Calculations such as Basel III HQLA (High Quality Liquid Assets) are not required. Cash amounts on Subscription and Redemption accounts will not be included. This field is intended to show the non-invested part of the portfolio, which is the same for all share classes in a fund.		
Values	Percentage described as a decimal figure, rounded to maximal 7 digits after the decimal point.		
Example	0.043 (instead of 4.3%)		

OF-ID	<b>OFRE000250</b>	Field Name	<b>Average Dividend Yield</b>

Data Type	double	Introduced / Revoked	1.26 / --
Description	<p>The effective maturity (net / option-adjusted, in years) of the fund, considering the expected call date of callable bonds. Applicable to bond funds investing in bonds (including convertibles) with a fix maturity/call date. Average effective maturity estimates the true maturity of bonds, considering the first call date of callable bonds / convertibles. Option-adjusted (net) figures. Calculation methodology should be aligned to the standards of the asset manager and the resulting fixture should be aligned to other publications (e.g. Factsheets). The definition available on "Investopedia" can be used as a reference (<a href="https://www.investopedia.com/terms/a/average-effective-maturity.asp">https://www.investopedia.com/terms/a/average-effective-maturity.asp</a>).</p>

OF-ID	<b>OFRE000335</b>	Field Name	<b>Average Effective Duration</b>
Field Tags	Ratios and Exposures		
Field Level	Fund		Link Reference
Data Type	double		Introduced / Revoked 1.26 / --
Description	<p>A measure of the interest rate sensitivity (net / option-adjusted) of the fund. Applicable to bond funds investing in bonds (including convertibles) with a fix maturity/call date. Option-adjusted (net) figures. Calculation methodology should be in line with the standards of the asset manager and the resulting fixture should be aligned to other publications (e.g. Factsheets). If the underlying bonds do not include embedded options, the modified duration can be used. In case of callable bonds, the first call date should be used for the calculation.</p> <p>The Morningstar definition (as per 30.04.2018) can be used as a reference: "A holding weighted average of effective duration, a measure of duration that accounts for embedded options, which measures the percentage change in value of the portfolio for a change in interest rates or yield, expressed as a ratio." If the bonds do not include embedded options, the modified duration can be used. Field Level	Fund		Link Reference
Data Type	double		Introduced / Revoked 1.26 / --
Description	<p>The yield to maturity (YTM) or redemption yield of a bond or other fixed-interest security, such as gilts, is the internal rate of return (IRR, overall interest rate) earned by an investor who buys the bond today at the market price, assuming that the bond will be held until maturity, and that all coupon and principal payments will be made on schedule. Yield to maturity is actually an estimation of future return, as the rate at which coupon payments can be reinvested when received is unknown. The figure is given before taking into account cost such as currency hedging or management fee.</p> <p>Applicable to bond funds investing in bonds (including convertibles) with a fix maturity/call date. Field Tags	Ratios and Exposures		
Field Level	Fund		<a href="#">Link Reference</a>
Data Type	double	Introduced / Revoked	1.26 / --
Description	<p>Weighted Average Maturity (WAM) is a measure of the average length of time to maturity (in days) of all of the underlying securities in the fund weighted to reflect the relative holdings in each instrument, assuming that the maturity of a floating rate instrument is the time remaining until the next interest rate reset to the money market rate, rather than the time remaining before the principal value of the security must be repaid. In practice, WAM is used to measure the sensitivity of a money market fund to changing money market interest rates. Definitions are available from both CESR's Guidelines on a common definition of European money market funds and the EU regulation 2017/1131.</p>		
Values	Decimal figure, rounded to maximal 7 digits after the decimal point.		
Example	50.2		

OF-ID	<b>OFRE000405</b>	Field Name	<b>Weighted Average Life</b>
Field Tags	Ratios and Exposures		
Field Level	Fund		<a href="#">Link Reference</a>
Data Type	double	Introduced / Revoked	1.26 / --
Description	<p>WAL (Weighted Average Life) is the weighted average of the remaining life (maturity) of each security held in a fund, meaning the time until the principal is repaid in full (disregarding interest and not discounting). Contrary to what is done in the calculation of the WAM, the calculation of the WAL for floating rate securities and structured financial instruments does not permit the use of interest rate reset dates and instead only uses a security's stated final maturity. WAL is used to measure the credit risk, as the longer the reimbursement of principal is postponed, the higher is the credit risk. WAL is also used to limit the liquidity risk. Definitions are available from both CESR's Guidelines on a common definition of European money market funds and the EU regulation 2017/1131.</p>

Field Level	Fund			Link Reference
Data Type	string		Introduced / Revoked	1.26 / --
Description	<p>Applicable to equity funds. A breakdown of the market capitalization of the underlying equity exposure (excluding cash and other positions). If possible, the methodology/thresholds of the benchmark provider of the fund (defined in field "OFST023200 Benchmark") should be used to define Large, Mid and Small Caps. If the fund does not have a benchmark, the categories are based on standards applicable to the equity market(s) that the fund is invested in. Major index providers covering the local markets may also provide further guidance on the classification.</p> <p>For the Swiss Market, the index structure of the Swiss Performance Index (SPI®) provided by © SIX Group could be used. The index is divided into the sub-indices SPI® Large, SPI® Mid and SPI® Small. Further details can be found in the SPI Family Factsheet .</p> <p>For this breakdown, "OFRE100108 Fund Ratios And Exposures Value Type" is mandatory and should contain the name of each capitalisation bracket represented in the portfolio, from the following list:  "Large Cap" / "Mid Cap" / "Small Cap" / "Cash" / "Other"  To provide a secondary confirmation of the capitalisation bracket, "OFRE100109 Fund Ratios And Exposures Value Type ID" may also be provided (optionally) and the following codes should be used, corresponding to the names above:  "LCAP" / "MCAP" / "SCAP" / "CASH" / "OTHR"</p> <p>Please refer to the "Fund Ratios and Exposures whitepaper (<a href="https://www.openfunds.org/knowledge/whitepapers/fund-ratios-and-exposures">https://www.openfunds.org/knowledge/whitepapers/fund-ratios-and-exposures</a>) for an example of the provision of this data.
